

# Touché Manual

**Drop the matter. Cut the noise.**

Touché is a public forensic workbench for organizing messy matters into a clearer structure. It helps a user collect the story, sources, claims, timeline, evidence gaps, noise, and next-step perspective without pretending to deliver a final verdict.

## HOW TO USE IT

1. **Drop the matter.** Paste a story, claim, article, report, transcript, note, link, image, video, filing, or issue.
2. **Add sources.** Include links, documents, labels, timestamps, names, records, and context that support or challenge the matter.
3. **Analyze and revise.** Run the matter, read the first-pass structure, then return with stronger sources as the picture changes.

## WHAT IT ORGANIZES

- What happened, who is involved, where it happened, and when it appears to have happened.
- Known facts, disputed claims, missing context, weak sources, contradictions, and unanswered questions.
- Evidence, timeline, noise, possible misinformation risk, and professional or next-step perspective.

## WHAT IT CAN HANDLE

- Local issues, public controversies, lawsuits, incidents, disputes, stories, rumors, reports, and timelines.
- Sports events, civic issues, organizational problems, public claims, investigations, and unresolved narratives.
- Any matter that benefits from a clean table of contents before deeper judgment or professional review.

## WHAT IT DOES NOT DO

- Touché does not provide legal advice, legal representation, emergency services, or professional services.
- Touché does not decide truth, guilt, innocence, liability, fault, damages, intent, credibility, or final outcome.
- Touché does not replace lawyers, investigators, journalists, courts, doctors, accountants, officials, or emergency help.

## Core rule

**Structure before judgment.** Touché turns a messy matter into a readable map. It separates facts from claims, sources from assumptions, signal from noise, and known information from missing information.

## WHAT TOUCHÉ MEANS

Touché means the point has been touched. The platform is built around first sight insight: a fast, structured first look at what matters, what is claimed, what is missing, and what needs more careful review. The purpose is not to make the loudest story win. The purpose is to make the matter easier to see.

## BOUNDARY

Touché is an information-organization tool. Users remain responsible for what they submit, how they interpret the output, and whether they need qualified professional help. If safety, emergency response, legal rights, medical judgment, financial decisions, or official action may be involved, contact the proper professional or authority.
